Comverge Joins Demand Response Coalition

(Washington, DC March 9, 2005) The Demand Response and Advanced Metering Coalition (DRAM) announced today that Comverge, Inc, a leading provider of demand response technology and services, has joined the industry group.

Dan Delurey, Executive Director of DRAM hailed the step as an important addition for the Coalition. “Comverge is a leader in the area of using both metering and automated control systems to enable demand response programs offered by utilities and regional independent system operators”, said Delurey. “Having them in DRAM will help us provide broader information on demand response to the many audiences out there that are looking to understand demand response and how they can help put it in place. Comverge’s membership will also allow us to more broadly represent the views of the demand response industry”

Frank Magnotti, Co-Founder and President and COO of Comverge Enterprises will become Co-Chair of DRAM and represent the company within the group. “We are excited to become a part of DRAM and join with other industry participants in educational efforts and outreach on demand response,” said Magnotti. “Comverge has a wide variety of offerings in the demand response area and we look forward to actively helping the group expand and enhance its efforts.”

Comverge is based in East Hanover, NJ. More information can be found online at: www.comverge.com

The Demand Response and Advanced Metering Coalition is a diverse group that includes providers of metering and demand response technologies and services to energy companies and directly to customers. Its members include eMeter, DCSI, Landis +Gyr, Echelon, EMON/MeterSmart, SmartSynch, Alliance to Save Energy, Elster Electricity, Tanatalus Systems, Hunt Technologies, Silver Spring Networks, and the Northeast Energy Efficiency Council.
